

Microsoft Fabric Roadshow

Ottawa | 27/11/2025

Shiney Prabhakar

Cloud and AI – Solution Engineer

What matters to your organization?

Increased sales and
happier customers

Reduced costs and
higher efficiencies

Mitigated
risks

Product and service
innovations

Are you making the
**most of your
data?**

72%

**Organizations lack
end-to-end visibility
into granular signals
across services**

Source: Futurum Decision Maker, September 2025

Leveraging real-time data can help companies accelerate speed and precision of business

Operational efficiency

make data-driven
decisions with

End-to-end visibility

holistic understanding of
business health and
discover actionable

Competitive advantage

identify opportunities and
mitigate risk in

What gets in the way **today?**

Data arrives too late to make a difference

Data volumes are too large and expensive

Data siloes between batch and real-time data

Too many instances for humans to track

Hard to find the high-value signals in time

Decisions are too slow to change outcomes

Fragmented market of real-time AI tools

	Capture	Transport	Operational Transforms	Analytics Transforms	Agents & Workflows
Open Source	 debezium	 kafka   ESTUARY	 beam  spark	 elastic  druid  ClickHouse	 crewai  LangGraph  RASA
Hybrid	 ESTUARY	 CONFLUENT  StreamNative  Redpanda	 bytewax  decodable  meroxxa	 tinybird  Google Dataflow  splunk  databricks  influxdata  F  Materialize  ClickHouse  star tree	 Kubeflow  Flyte  databricks  Temporal
Managed Service	 striim  ORACLE GOLDEN GATE	 amazon KINESIS  StreamSets  TIBCO	 ksqlDB  DeltaStream	 DATADOG  Google Big Query  SingleStore  Amazon TimeStream	 snowflake  OpenAI  Palantir

Need for a unified platform for real-time AI

From

Fragmented, fragile tech stack

Advanced skillsets required

Faster batch data processing

Data silos, lack of governance

Hard to find unknown unknowns

To

One, unified SaaS solution

Accessible data and analytics tools

Real-time event ingestion

Unified single data estate

AI-powered insights and actions

Rich set of real-time streaming connectors

Available now

External sources

- Apache Kafka
- Apache Spark
- Apache Flink
- MQTT v5
- Azure SQL DB CDC
- PostgreSQL DB CDC
- MySQL DB CDC
- Azure Cosmos DB CDC
- Azure SQL MI DB CDC
- SQL Server on VM DB CDC
- Azure Data Explorer
- Azure IoT hub

(continued)

- Google Cloud Pub/Sub
- Confluent Cloud for Apache Kafka
- Amazon Kinesis Data Streams
- Amazon Managed Streaming for Apache Kafka
- Solace PubSub+
- Azure Event Hubs
- Azure Service Bus
- Azure Event Grid Namespace
- Real-time weather
- OpenTelemetry
- Telegraf

(continued)

- Splunk Apache Log4j
- FluentBit
- Logstash
- NLog
- Serilog

Fabric & Azure events

- Fabric Workspace Item events
- Fabric Onelake events
- Fabric Job events
- Azure Blob Storage events

Upcoming

External sources

- HTTP
- Mongo DB CDC
- Oracle DB CDC
- Azure blob file stream
- MQTT v3.1.1
- ServiceNow
- OneLake file stream
- Salesforce
- Delta lake CDF
- Eventhouse
- Fabric SQL CES

(continued)

- JDBC
- JIRA

Custom connectors

- SAP Hana

Fabric events

- Anomaly Detection events
- Capacity Utilization events

MAP

Create, customize, and consume map-centric applications using simple no-code experiences, with no GIS expertise required

Connect maps seamlessly to your live data in Eventhouse, Lakehouse, and OneLake

Optimize your operations with geospatial reasoning, analytics, and views

Real-Time Intelligence in Microsoft Fabric

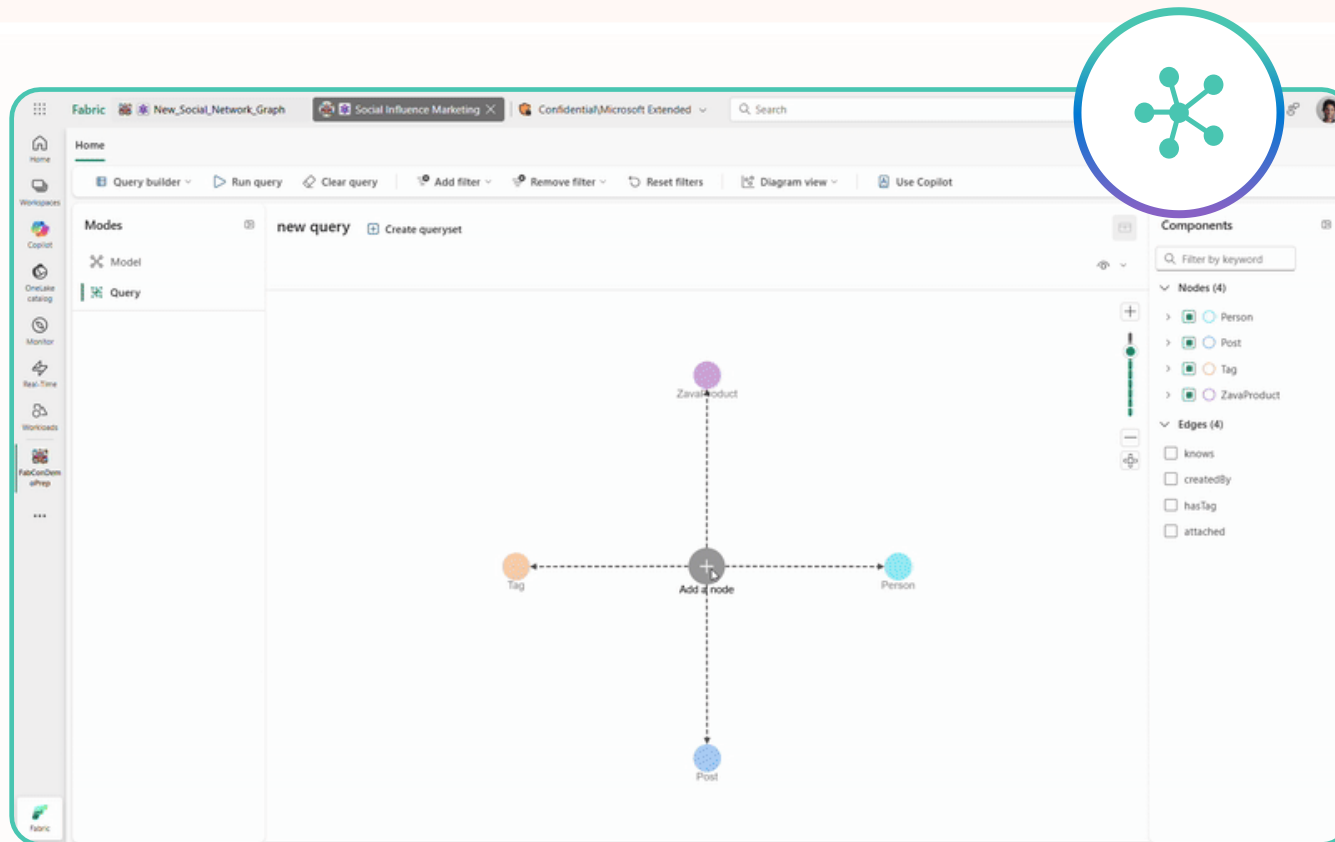

Next Month

GRAPH

Create graph models over your data in Eventhouse, Lakehouse, and OneLake in minutes using simple no-code experiences

Explore, discover, and analyze multi-hop relationships to understand how entities connect

Optimize and mitigate risk in your supply chains, customer experiences, and other operations

Real-Time Intelligence in Microsoft Fabric

Public Preview

Anomaly Detector

Discover the signals that matter but are easily overlooked in a sea of data using no-code tools, no data science expertise required

Continuously scans your events 24/7 as they arrive in Eventhouse for anomalies

Automatically trains the anomaly detection model to your operations' data

The diagram illustrates the Microsoft Fabric Real-Time Intelligence architecture, showing the flow of data from sources through processing and analysis to various consumption and activation points.

Data Source(s): A collection of icons representing various data sources, including MQTT, SQL, and others.

Connectors: A section showing the Solace logo and icons for different connector types, such as database and cloud connectors.

Real-Time Intelligence Pipeline:

- Ingest & Process:** Data flows from sources into the **Eventstream**.
- Analyze & Transform:** Data from the Eventstream is processed through **Eventhouse**.
- Act:** Data is then sent to an **Activator**.

Consumption and Activation:

- Consume:** Data is consumed through various interfaces: **KQL Queryset**, **RT Dashboard**, **Maps**, and **Digital Twin Builder**.
- Power BI:** Data is also available for visualization in Power BI.

Real-Time Hub: A central hub that manages the real-time data flow.

OneLake: The underlying data lake that stores all the data.
